

INSTRUCTIONS FOLLOWING CONNECTIVE TISSUE GRAFTING
Dr. Jeffrey Doblin, D.M.D. Periodontist

Please refrain from brushing and flossing at the surgical site for the first two weeks following the procedure. The prescription mouth rinse will minimize plaque buildup.

One week after the procedure, Dr. Doblin will see you for an observation only.

Two weeks after the procedure, the sutures will be removed and you may use a cotton Q-tip dipped in the prescription mouth rinse 2X a day to clean the surgical site.

Four weeks after the surgical treatment, Dr. Doblin will evaluate the healing and will likely then recommend resumption of normal oral hygiene, including brushing and flossing.

If you have any questions at all, please call Dr. Doblin at 610-996-4314
